Portfolio: zenith-xanxen.com; ShanDong province China

EDUCATION

University of Southampton

UK

MA Design Management, Winchester School of Art

Sep 2024 - Nov 2025

- **Main modules:** Design Strategy, Service Blueprinting, User Research and Data Analysis, Project Management, Innovation Management, HCI/UX Evaluation and Digital Transformation.
- **Dissertation:** Usability Evaluation and Management Strategy for Industrial IoT Platform Interaction Design under China's Dual-Carbon Policy.
- **Certificates:** Google User Experience (UX) Design; Alibaba ACP AI Certification.

Dalian University

Dalian

BA Fashion and Apparel Design Art Academy

Sep 2019 - Jun 2023

- **Main modules:** User Psychology, Design Psychology, Brand Market Research, Brand Strategy and Visual Systems, Project Management, Business Models and Consumer Behaviour.

SKILLS

- **AI Product:** Design Q&A, review, analysis and autonomous-decision AI tools around user tasks, inputs/outputs, model boundaries, human review and exceptions.
- **Business Translation:** Convert vague pain points into field systems, task chains, decision rules, output formats and evaluation metrics.
- **Data & Workflow:** Coze workflows, prompt design, intent recognition, RAG, conversation context, file parsing, API integration and multi-node orchestration.
- **UX & Product Expression:** UX research, information architecture, service blueprints, prototyping and usability testing; translate complex technology into clear product interfaces.

PROFESSIONAL EXPERIENCE

Janong Group (FMCG) -- Channel Marketing & AI Scenario Translation

Shanghai Dec 2025 - May 2026

- Coordinated FMCG in-store promotion, roadshow and seasonal-launch execution with sales, brand teams, vendors and stores, covering materials, tasting samples and feedback.
- Standardised store-visit fields across Hema, Yonghui, 7Fresh, Walmart and ALDI, covering display, POSM, price tags, promoters, competitors, samples, stock and sales.
- Structured promotion, store, sales, expense, attendance and contract data for AI store visits, analysis and contract review; earlier Mailman work covered Olympics/World Cup localisation and media materials.
- Connected frontline execution observations with AI product design, turning recurring store-feedback and review problems into demonstrable Agent workflows.

PROJECT EXPERIENCE

Janong Group / AI Product Practice

AI Product Manager

AI Store Visit Assistant Agent

Feb 2026 - May 2026

- Mapped channel-marketing execution into an AI store-visit assistant for activity status, promoter attendance, materials, tasting arrangements, abnormal sales and issue follow-up.
- Converted store, staff, activity, expense and contract information into fields, intent categories, extraction rules and human-review checkpoints.
- Built reusable store-visit dimensions for display, POSM, price tags, competitors, tasting feedback, stock and sales, supporting preparation, feedback and review loops.
- Translated high-frequency execution questions into Agent intents such as sales anomaly, promoter attendance, material delivery, sample arrangement, activity status and contract-term checking.
- Defined fallback and human-review rules for incomplete store data, activity records or contract materials, reducing the risk of overconfident model output.

AI Contract Agent

Dec 2025 - Apr 2026

- Designed contract review and version-comparison workflows for activity, hotel and supplier agreements, targeting slow manual checks and missed clause risks.
- Translated review rules into model tasks that output risk points, original evidence, risk explanations and revision advice for traceable human review.
- Optimised prompts with per-rule checks, structured output templates and quotation constraints to reduce missed implicit risks, vague advice and inaccurate source references.
- Separated review evidence from recommendation text so users can verify the original clause, understand the risk reason and copy revisions into the contract workflow.

Intelligent Analysis Assistant Agent

Feb 2026 - May 2026

- Built a natural-language data-analysis workflow for non-SQL users, turning business questions into metrics, dimensions, filters and chart-ready conclusions.
- Connected data-model and dimension knowledge bases with SQL, analysis planning and ECharts output.
- Designed transfer scenarios for channel weekly reports, abnormal store-sales diagnosis, promotion-cost review and campaign-effect summaries.
- Specified outputs as chart type, data table, key conclusion and follow-up question, making the Agent to demonstrate and iterate with business feedback.

AI Customer Service Agent

Feb 2026 - Apr 2026

- Prototyped an after-sales Q&A workflow for logistics, payment and service issues, split into scenario recognition, solution judgement, matching and response generation.
- Used conversation history, intent boundaries, solution matching and bad-case iteration to improve answer stability, readability and maintainability.
- Refined prompt constraints for scenario misclassification, mismatched solution IDs, overly long replies and inconsistent tone, improving workflow maintainability.
- Verified a classify-then-match-then-reply pattern that can extend to business FAQ, store exception feedback and internal process Q&A.

Vibe Coding: AI Tools & Interactive Portfolio Website

2025 - 2026

- Integrated store-visit, contract, analysis and customer-service Agents into one bilingual dashboard with online dialogue, workflow previews, Coze API and SSE streaming.
- Built interactive experiences with Three.js, Canvas and MediaPipe Hands, turning AI and interaction capabilities into clickable product interfaces.
- Implemented bilingual switching, responsive adaptation and cross-page state synchronisation, presenting each Agent as a usable product module rather than a demo.
- Packaged technical demos through tool cards, scenario descriptions, chat-style entry points and an interaction workshop for clearer user education and portfolio presentation.
